FOOD WASTE MANAGEMENT APPLICATION

Project Guide: P.SANTHOSH KUMAR

Student Name: M.Rakesh

ABSTRACT :

Wasting food is a common problem in our society. This Project aims to reduce food wastage and built an android mobile application that allows individual users or restaurants to donate and share their foods and leftovers with people in need.

Many restaurants tend to throw the leftover food at the end of the day even though the food is perfectly fine to be eaten, some families can barely afford proper meals with their limited money. Therefore, we decided to create our application to link the restaurant with the unfortunate people, so instead of throwing the food, the unfortunate will be able to pick it up from the restaurant at the end of the day.

- My application have many types of donating users either from organizations such as restaurants, or a family or a single user
- Location facility also there, donating user should specify the location of the shared food.
- Adding the time and date of each meal shared by users

Technologies:

Software Requirements:

Frontend: Java Script, Bootstrap, HTML, CSS

Backend: PHP(xampp), MYSQL(Database), Angular JS.
